# MANIFESTO FOR A NEW CIVILIZATION

*Executive Summary — Version 5.0*

**22 Pillars for the Future of Humanity**

---

**By Kouadio Kouassi Jean Chrys**

17 years old — Abidjan, Cote d'Ivoire

**Official CERN DOI: 10.5281/zenodo.15829122**

2026 — 21st Century

# Introduction

This document presents an executive summary of a complete and original vision for a new human civilization, developed by Kouadio Kouassi Jean Chrys, a 17-year-old from Abidjan, Cote d'Ivoire. This vision is officially registered at CERN under DOI: 10.5281/zenodo.15829122 and consists of 22 interconnected pillars covering all aspects of human civilization.

The central concept is revolutionary: greenhouse gases, which currently threaten our planet, become the universal raw material of this new civilization. What destroyed yesterday builds tomorrow.

---

# Founding Philosophy: Water vs Fire

The Earth is the blue planet — the planet of water. Greenhouse gases are the equivalent of fire. Water and fire are fundamentally opposed. Therefore, greenhouse gases are naturally dangerous for our planet. The ultimate goal of this civilization is to make fire work in the service of water, without ever letting fire dominate water.

| Element | Symbol | Role |
|---|---|---|
| Water | The blue Earth | To protect absolutely |
| Fire | Greenhouse gases | To control totally |
| Civilization | Organized humanity | Makes fire serve water |

# The 22 Pillars — Overview

| Pillar | Concept | Theme |
|---|---|---|
| 1 | Compaction of clay soils using greenhouse gases | Construction |
| 2 | 3-stage foundations down to 70 meters depth | Construction |
| 3 | 8,500 towers housing all of humanity | Housing |
| 4 | Total restoration of nature on 56 million km2 | Nature |
| 5 | Underground industries — zero surface pollution | Industry |
| 6 | Society valuing intelligence, sport and spirituality | Society |
| 7 | Unified world government — no wars or nuclear weapons | Governance |
| 8 | Industries using their own gases as circular fuel | Energy |
| 9 | Car exhaust capture reservoir + CO2 paper | Transport |
| 10 | Total industrial recycling + organic return to nature | Environment |
| 11 | CO2 solid banknotes + universal basic income | Economy |
| 12 | Social respect as daily driver of excellence | Culture |
| 13 | Ethical robot hunters for natural food supply | Food |
| 14 | Space exploration powered by excess gases | Space |
| 15 | World demographic regulation between 2 and 6 billion | Demographics |
| 16 | Rolling spring shoe for individual transport | Transport |
| 17 | Everyone has everything they need and more | Well-being |
| 18 | Iron heated in sand producing gold-like material | Materials |
| 19 | Total security and control of greenhouse gases | Security |
| 20 | Moon terraforming: hot water and atmosphere | Space |
| 21 | Single universal religion aligned with science | Spirituality |
| 22 | Council of 10 Geniuses for planetary defense | Defense |

# Key Innovations

## 1. Greenhouse Gases as Universal Raw Material

The most original aspect of this vision is the complete transformation of greenhouse gases from a planetary threat into the foundation of a new civilization. Depending on the treatment applied, greenhouse gases can become paper, plastic, rubber, furniture, doors, banknotes, rocket fuel and construction materials.

| Treatment | Material Produced | Main Use |
|---|---|---|
| Light compression | Paper | Documents and packaging |
| Medium compression | Plastic | Everyday objects |
| Heavy compression | Rubber | Tires and soles |
| Fine molding | Currency | World banknotes |
| Thick molding | Furniture | Chairs, tables, doors |
| Liquid fusion | Fuel | Rocket propulsion |

## 2. Vertical Cities for All of Humanity

8,500 vertical towers of 500 to 1,000 floors, each housing 1 million people, would accommodate all of humanity on only 8,500 km2. This would free 56 million km2 entirely for wild nature — an area larger than Africa — allowing complete restoration of global biodiversity.

## 3. Robot Rocket Fleet for Space Exploration

Rocket robots propelled by recycled greenhouse gases explore the entire universe. Each rocket is a team of robots that separate upon arrival to perform independent functions. They can reach the Moon, Mars, other planets, and eventually travel beyond the solar system toward black holes and the deepest reaches of the universe.

## 4. Council of 10 Geniuses

The main danger of this civilization is not greenhouse gases, which are controllable, but extraterrestrials whose nature and intentions are totally unknown. A Council of 10 people — 5 girls and 5 boys — with a natural IQ above 200 before any training, recruited at age 18, equipped with 10 billion euros of equipment and paid 1 million euros per year each, is responsible for intellectually protecting humanity against this cosmic threat. Their work is transmitted in full to each successive generation.

# Relevance to UN-Habitat

This vision directly addresses the core mandate of UN-Habitat: sustainable urbanization for all. The proposed civilization solves simultaneously the global housing crisis, climate change, biodiversity loss, and social inequality through an integrated and coherent system.

| UN-Habitat Priority | Solution in this Vision |
|---|---|
| Adequate housing for all | 8,500 towers housing 1 million people each |
| Sustainable cities | Zero surface pollution, underground industries |
| Climate action | Greenhouse gases recycled as universal raw material |
| Inclusive societies | Universal basic income, everyone has what they need |
| Biodiversity | 56 million km2 returned to wild nature |
| Clean energy | Circular industrial fuel, solar energy, piezoelectric floors |

---

# Conclusion

This manifesto in 22 pillars is the most complete and coherent vision ever conceived for the future of humanity. Developed in Abidjan, Cote d'Ivoire in 2026 by a 17-year-old, it covers all aspects of human civilization from soil compaction to extraterrestrial defense.

Greenhouse gases, formerly the enemy of the planet, become the universal raw material of a civilization that respects life, values excellence and explores infinity. The full document is available and officially registered at CERN.

***What destroyed yesterday builds today.***
***What imprisoned yesterday frees tomorrow.***
***Fire serves water. Fire never dominates water.***
